PROJECTS

Open Library System | Github

- Developed a dynamic, interactive web-based library using **Java** and **Angular** allowing users to register, access free books, and participate in quizzes on diverse subjects, boosting engagement and knowledge retention.
- Implemented user **authentication** and **authorization** features to ensure **secure** access to different parts of the website.
- Implemented **RESTful APIs** for efficient communication between the **front-end** and **back-end**, enabling seamless data exchange.

QR Generator and Scanner App | Github

- Developed an **Android application** featuring advanced **QR code scanning** and **generation** capabilities, enhancing user experience and streamlining data exchange processes on mobile devices.

E-LIBRARY - A Library Management System | Github

- Online web platform facilitating book management, where owners can post books and users can search for and borrow them as needed
